SCHOOL MAPS APPARATUS

PUPILS DESKS SEATS

The Common Sense Bent Wood Desk.

WHAT THE PEOPLE WHO USE IT SAY. READ CAREFULLY.

Tiffin, Seneca Co., O.

I have been for many years practically engaged in the school room, and in that capacity have examined and used nearly all the different styles of school furniture. While all the different styles have great merit, it is my opinion, after careful investigation, that for durability, strength and solidity, the "Common Sense" Bent Wood Desk and Seat surpasses them all. I unhesitatingly recommend it to school committees in country districts as admirably adapted to their wants, and as especially calculated to withstand the rough usage to which school furniture in those districts is to a great extent subjected.

H. B. FURNESS, Supt. Public Schools, Tiffin, O.

Marion Centre, Kansas.

After having carefully examined the "Common Sense" Bent Wood School Desk, I can safely say, without hesitation, that it possesses points of excellence that I have seen in no other, and were I purchasing anything in that line would give it a trial.

T. A. BOGLE, Principal Marion Centre Schools.

Having examined the aforesaid desk, I heartily concur in the above.

E. W. HOCH, Editor Marion County Record.

Having also examined the aforesaid desk, I fully agree with the above statements.

D. HARRISON, County Superintendent.

Columbus, O., May 1, 1884.

We purchased about 600 of your new Excelsior Desks of all sizes last year for the Garfield Building. They have so far given excellent satisfaction to the Board, teachers and pupils.

Yours truly, R. N. STEVENSON.

Kansas City, Mo., June 12th, 1883.

To Whom It May Concern:—We have in use in our schools a great many different styles of school desks, and of all the desks I have examined, I consider the "Common Sense" Bent Wood Desks the best. In my opinion, it is far superior to any iron desk I have yet seen. It combines strength and durability, and does not get out of fix easily.

J. M. GREENWOOD, Superintendent Schools.

We the undersigned, who have the "Common Sense" Bent Wood Desks in use in our buildings, heartily concur with Prof. J. M. Greenwood in his opinion of them.

JOHN T. BUCHANAN, Prin. of Franklin School.
GEO. D. LUTZ, Prin. of Chase School.
J. C. DAVIS, Prin. Benton School.
HENRY A. WHITE, Prin. of Morse School.
G. B. LONGAN, Prin. Washington School.

At a regular meeting of the Board of Education of the City of Columbus, Ohio, held Tuesday, June 25, 1883, on recommendation of the Committee on Supplies, your bid for furnishing seats was accepted. The sample seat which accompanied the bid is of superior construction, and in every respect desirable, and the award was made to you because of this.

We want 600 desks now, and will probably need 1600 during the year.

BOARD OF EDUCATION, Columbus, Ohio.

Covington, Ky.

To Whom It May Concern:—I have had the Bent Wood Desk in use for two years and find it all and more than is claimed for it. I am highly pleased with it, and take pleasure in recommending it to all who may be in need of school furniture.

J. J. NIGMAN, Principal Second District School, Covington, Ky.

Covington, Ky., May 2, 1884.

Gentlemen:—It gives me pleasure to recommend your Bent Wood "Common Sense," Desk. We have had them in use in our school four or five years and they are as good seemingly as when first put in. I objected to the iron standard desks four years ago. The "Fashion" desk was put in and I feel confident if I had been in the city this desk would not have been adopted. I find that by use the grooves enlarge and they become rickety, noisy and a great annoyance. A short time ago the President of the Board and Chairman of Committee on repairs visited the schools and expressed their preference for the Bent Wood Desks over the iron desk, saying it looked more like household furniture.

We have a great many styles of iron desks in use in our schools of different patterns. But I consider the "Common Sense" Bent Wood the best and most durable desk in use.

GEO. A. YATES, Principal Third District School.

West Richfield, Summit Co., O.

Dear Sir:—In regard to the "Common Sense" School Desks, I think they are as good a desk as any: not as liable to break as the iron frame desk. I was well pleased with those I received from your company, and can safely recommend the "Common Sense" Desk to all desiring school furniture.

Respectfully, N. SWEIGART.

Cuyahoga Falls, Summit Co., O.

Dear Sir:—The "Common Sense" Bent Wood Desks purchased of you last fall are giving good satisfaction. The Board are well pleased with them, and consider them very much better than iron.

Yours truly, H. B. CAMP, Chairman of Committee on Buildings and Supplies.

Ghent, Summit Co., O.

Dear Sir:—I would say, as to the seats purchased from you last year, known as the "Common Sense" Wood Desk that they were all that you recommended them to be—strong, durable and easy—and would recommend to all purchasing school furniture.

Yours, etc., A. HERSHEY, Chairman of Committee.

Copley, Summit Co., O.

DEAR SIR:—The "Common Sense" Bent Wood Desks purchased of you last year have given good satisfaction. I consider them a very desirable desk for school purposes, and preferable to the iron standard desk. Yours respectfully,

CHAS. TAYLOR, Clerk of District No. 9.

Copley, Summit Co., O.

DEAR SIR:—The "Common Sense" Bent Wood Desks purchased of you last year have given the very best of satisfaction. We find, by using them, that they are all they are represented to be. For comfort of scholars, general appearance, and durability, we think they have no superior, and can cheerfully recommend them as such.

JOHN M. JOHNSON, Clerk of District No. 4.

Doylestown, Wayne Co., O.

DEAR SIR:—The Bent Wood "Common Sense" Desks bought of you last spring, for our public schools, are entirely satisfactory. They prove strong and durable, and fill your warrantee in every particular. I believe them less liable to break or give way than the iron desks such as are in same building.

S. H. MILLER, Clerk of Board.

Wadsworth, Medina Co., O.

DEAR SIR:—The "Common Sense" Bent Wood Desks bought of you give good satisfaction, are strong, durable, very easy to sit on, very nicely made, make no noise, like most iron framed desks; in short, they are a perfect desk. Yours, etc., R. O. HINSDALE, Clerk.

Granger, Medina Co., O.

DEAR SIR:—Concerning the "Common Sense" Bent Wood Desks we bought from you, for our new school house, we like them, and think they are superior to any iron standard desks.

Yours, etc., O. S. BURT, Committee.

Canton, Stark Co., O.

SIR:—The "Common Sense" Bent Wood Desks which we have in our school house gave good satisfaction to all those capable of judging or comparing of seats, and pronounce it as their opinion, that the said seats are far superior to any iron standard desk; and I give it as my opinion also, that the iron standard desk would not meet with the same approval. Yours respectfully,

CORNELIAS FAUST.

Canton, Stark Co., O.

SIR:—We are highly pleased with the "Common Sense" Bent Wood Desks and believe them to be more durable than any iron standard desks. A school room with the Bent Wood Desks looks neat and cheerful; is convenient for pupils and teacher. Respectfully, etc., JOHN K. NEISZ, Clerk.

New Berlin, Stark Co., O.

DEAR SIR:—We are well satisfied with the "Common Sense" Bent Wood Desks. They have given us good satisfaction. Respectfully yours,

JOS. MARCHAND, Clerk of District No. 7, Jackson Township.

Hartville, Stark Co., O.

SIR:—The "Common Sense" Bent Wood Desks you sold us last fall are superior to any I have ever seen. They have given good satisfaction in every respect, and are far superior to the iron standard desk in the Districts south of us. Yours, etc., FRANK MACHAMER, Clerk.

Cairo, Stark Co., O.

SIR:—My opinion of your "Common Sense" Bent Wood Desk: I think it is better than the iron standard desk; I think it is not as liable to break; I like it and prefer it to iron; it is a very comfortable seat. Yours in haste,

GEO. GRUBB, President Board of Education, Lake Township.

Pierce P. O., Pike Tp., Stark Co., O.

DEAR SIR:—The "Common Sense" Bent Wood Desks are much preferred to the iron standard in the adjoining Districts, by both teachers and scholars. We like them splendidly. They are durable and neat. Yours truly, ADAM MUCKLEY, Clerk.

Augusta, Carroll Co., O.

DEAR SIR:—Those "Common Sense" Bent Wood Desks we purchased from you are giving good satisfaction. I believe they are better, stronger, and will bear the rough usage of the school room longer than any iron standard desks made. This is also the opinion of the members of our School Board and most of the teachers, so far as I have heard an expression. Yours, etc., CALEB HALE, Clerk.

East Rochester, O.

SIR:—The desks are giving very good satisfaction. Having taught schools furnished with iron standard desks, I unhesitatingly pronounce your "Common Sense" Bent Wood Desks greatly superior to any iron standard desk that I have ever tested. Yours truly,

ASA PIM, Clerk and Teacher.

Nankin, Ashland Co., O.

SIR:—We are well pleased with the "Common Sense" Bent Wood Desks. We would not give them for any cast iron desk we ever saw. Yours, etc., G. W. ARTMAN, Township Clerk.

Massillon, Stark Co., O.

DEAR SIR:—I must say that the "Common Sense" Bent Wood Desks give perfect satisfaction in every respect. I am fully confirmed in my former expressed opinion, that they are the best desks manufactured. Truly yours, JOHN H. FISHER, Clerk.

Cincinnati, Ohio.

TO WHOM IT MAY CONCERN:—This is to certify that J. C. Brooke has furnished our office, which is in every way satisfactory, among the furniture is two large sized revolving book racks carrying a weight of 5 to 600 pounds of books each, which work smoothly and pleasantly, we can recommend these cases and this company to any person requiring their services. R. G. DUN & CO.

OLD EXCELSIOR DESK.

MADE FIVE SIZES.

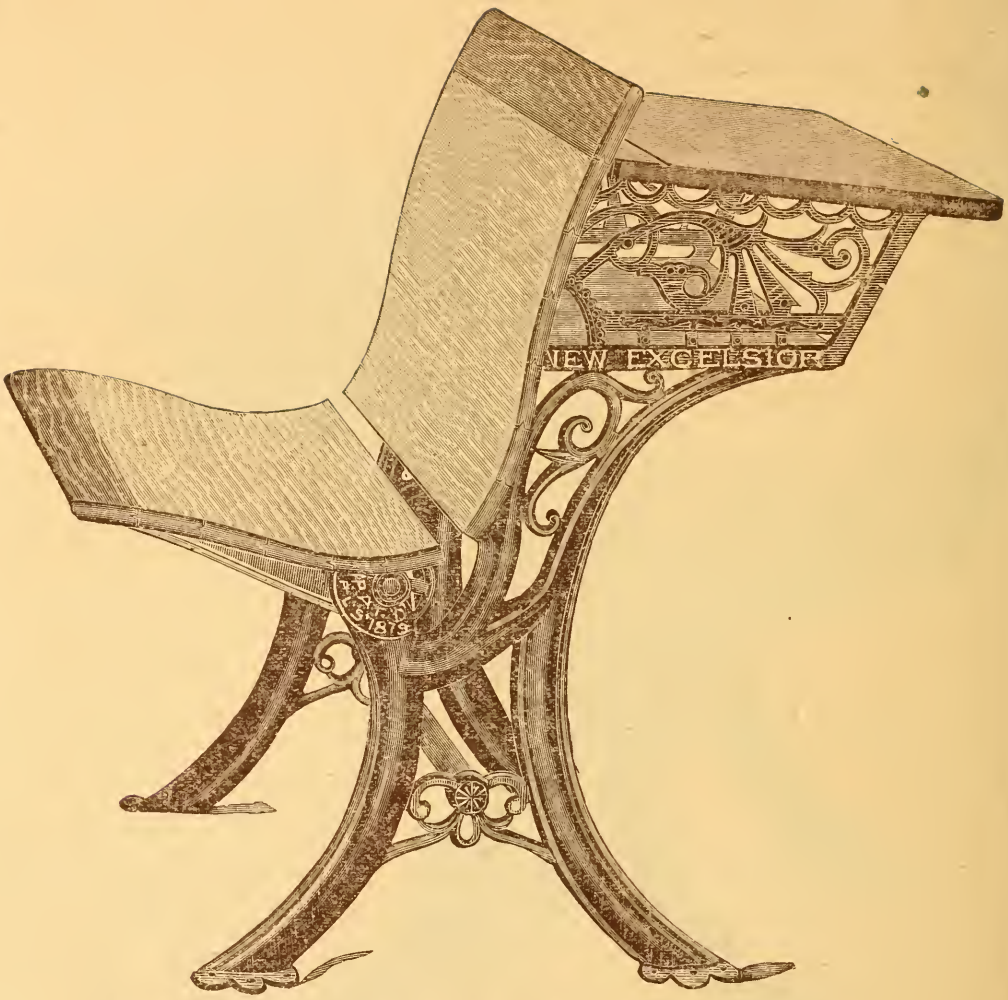
Each size, Double for two pupils and Single for one pupil.

Those desiring a *cast iron desk*, will find this a very desirable style.

The ends or frames are of new design, so arranged as to get the most strength. The physiological construction has been pronounced by the best physicians of the country perfect. The general appearance and finish is beautiful. The *seat arms* (which are the most likely part of a desk to break) are made extra strong and durable.

The seat hinge is certainly the best in the market, patented April 8, 1879. It works smoothly and noiselessly, has two double axles working in two hubs with double stops, making four supports in the hinge, with a steel spiral spring inside to take up the slack, which will make the hinge work just the same in twenty years as it does the first day. It is acknowledged by all good judges to be the best and strongest hinge made.

The desk in shape is like the old Excelsior desk, of which more than 300,000 are now in use.



NEW EXCELSIOR DESK.

Made in Six Sizes: No. 1, or High School, the Largest, No. 6, or Primary, the smallest Size. Each Size made double, for Two Pupils, or Single, for One Pupil.

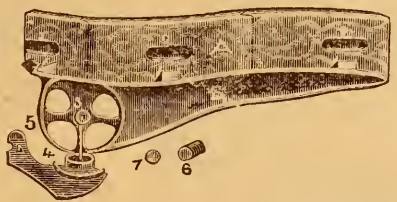
Those desiring a CAST IRON FRAME DESK will find this the latest and best made. The ends or frames are of new design, so arranged as to get the most possible strength in the desk. The physiological construction of the desk is perfect. The general appearance and finish is beautiful. The compound curve in the back, which swells out at the lower part is acknowledged by the medical world, as well as by the pupil who uses the desk every day, to be the natural healthful support required for the spine of the growing pupil, so as to keep the body healthful as well as comfortable, while the compound curve in the seat makes you feel that you have dropped into the perfect rest and comfort, and are satisfied.

The general appearance of the desk is *artistic, unique, and beautiful beyond anything ever offered to the public.* The castings are broad; heavy and strong, with the center of gravity so poised as to make the least possible strain on the desk. Each curve is graceful, *giving the largest room for the knees of the pupil*, the broadest and firmest sitting on the floor, and at the same time the *largest Book-Box* of any desk in the market, and to the otherwise strongest desk castings made, is added what has never before been used on a school desk, *the matchless strength of the mechanical "T Head" or the rib support of the coneave standard.* This, by the well known laws of mechanics, makes the standards as strong as if the cavity were filled with solid iron, while it really is stronger and better than if made solid.

The fastening of the woods to the irons is by the new, strong process of our

COMBINED SLOT AND DOVETAIL FASTENING

This is new, distinctive, and will be found the strongest, simplest, and most effective way ever used to fasten desks together.



In the cut A represents the wood of the seat, and B the iron seat arm, the three little lugs on top of seat arm marked 1 represent the iron slots or keys made in dovetail shape, they are placed into the three dovetailed gains in the wood marked 2, and then driven up until they are locked perfectly tight. It can all be done in less time than told, and can never split out or get loose.

All other Dovetail and T-head fastenings used in desks have the gain in the wood cut continuously across with a tool that always cuts the same size, so that when driven into the irons (which, in moulding, are made a shade heavier or lighter, owing to the moulder) it is liable to force the end of the wood so that it will split out, and thus destroy the fastening and ruin the desk. With our DOVETAIL KEY this cannotoccur, as less than one-third of the wood is cut and the remaining two-thirds is solid, to prevent a possibility of splitting out. These slots are amply strong, and will hold stronger than a continuous Dovetail and will never split out or get loose.

—THE HINGE.—

Is certainly the best one made. Patented April 8th, 1879. It works perfectly, smooth, and noiseless. It has double axles, working in two hubs with double stops, making four supports, and with a steel spiral spring inside to take up the slack, which will make the hinge work just the same in twenty years as it does the first day.

In the cut above given the figures 3 and 5 represent the axle projection that fits into the double hub marked 4, these work in a circle just like an axle and hub, and are strong, smooth, and noiseless in their action.

The bolt of the hinge is made square so that it passes through a square hole in the seat arm and is caught by the square in the washer numbered 7 in cut. This effectually prevents the turning off or loosening of the bolt, and obviates the necessity of riveting the nut on, as is done in other desks, so that if anything gets out of order the bolt in our hinge has only to be unscrewed, while theirs require a mechanic with tools and time to get the riveted nut off. In the Excelsior Hinge no strain is put upon the bolt; its duty is merely to hold the seat arm and standard together and furnish the stay for the spring, while the rolling motion of the hinge prevent all noise and obviate the necessity of rubber, so common in other desks to prevent noise, and which so soon rots and falls off and permits the seat to drop down and get noisy. But in the Excelsior all this is overcome, and the two axles projecting into the two hubs take all the strain off of the bolts, so that the hinge will do its work without the bolts being in at all. The steel spiral spring, designated by 8 in cut, has a rebounding power equal to 25 pounds or more, and there being two of these to a desk it effectually holds the seat at any angle desired, taking up all the slack of wear in the hinge. It is simple, noiseless, durable, and it is acknowledged by all good judges to be the best and strongest hinge made.

WE HAVE TESTED IT WITH TWO TONS WEIGHT, AND IT STOOD PERFECTLY FIRM. The desk in shape is similar to the old Excelsior Desk of which HUNDREDS OF THOUSANDS ARE NOW IN USE.

Added to the other distinctive points of merit of the New Excelsior Desk is the

—FOOT REST.—

This being half way between the seat and the floor, where the greatest strain and the longest noise of every desk is found, and where it is more likely to break than any place else by a "jam" or sudden strain, we have the brace and support of the Foot Rest. This puts the strain on both legs instead of one, and makes the desk just twice as strong as without it; besides it gives stiffness and firmness to the desk and prevents its getting loose and rickety, which soon wears and destroys a desk. In the weary hours of confinement the legs become cramped and ired for want of a resting place, but in the *New Excelsior Desk* this want is supplied, and the pupil finds for his feet what the traveler in a railroad car finds in his foot rest. Competitors say, "It is no advantage," but let the railroad traveler get in a seat without a foot rest and only for a few hours, you will find him looking for and demanding a seat with a foot rest; and how much more is the foot rest to the child who, young and active, is confined weeks to the traveler's hours? Competitors say, "It is in the way of sweeping," but this is essentially untrue (there being room enough to sweep under it), and it is only a subterfuge to induce people to buy their desk which has not got a foot rest in it. The foot rest can be left out when desired, and leaves the desk stronger and stiffer than others.

DESCRIPTION OF THE

Common Sense Solid End Bent Wood Desk.

The following description of our Common Sense Desk, with the accompanying illustrations, will doubtless enable the reader to readily understand its construction, and thereby see for himself *its very great claims of superiority*:

Cut A.

The end is made of lumber one inch and a half thick. It is first sawed seven inches wide, the grain being straight. The lower part is then slotted by taking out of the center a piece two and a half inches wide, thus leaving two legs, each two inches wide. (See Cut A.) The end is then put into the steam chest and thoroughly steamed to prepare it for bending. It is then placed upon the bending table, and while the upper part is solidly confined with iron clamps on each side, the legs are so confined with Iron Straps, extending around each, that when the screw power forces the wedges up and bends the legs *outward*, the grain on the outside is *upset*, and at the same time the grain on the inside of each leg is not stretched by the bending process. When it is thus bent, it is kept in that shape by a form, and placed in a peculiar dry house, which does not check the lumber, at a temperature from 140° to 175°.

Cut B.

The ends are kept in this dry house until they are known to be thoroughly dry, in fact "bone dry." The forms are then taken off, and the end is ready for machinery. Ends thus bent are warranted to never change their shape, even if left out of doors, in all kinds of weather. This is clearly shown in the fact that plow handles bent in this way never change their shapes. The bracket (or end of the book box), is usually nailed or screwed to the inside of the end; but in this desk we mortise and tenon the end to the bracket, thereby making it much stronger and far more beautiful in appearance.

Cut C.

The bracket and end mortised and glued together, we call the desk *standard*. (See Cut C.) All the iron used in the construction of the desk is *malleable* and *can not be broken*. The foot-caps are bolted and screwed to each foot. The hinge iron, which is riveted upon the inner side of each standard, has a rib on its inner side, which rib is let into the wood, thereby taking the strain entirely off the rivets. Lateral or side pressure is the pressure that causes desks to become *rickety* and *shaky*. This desk can never become so. Why? From the manner in which it is put together. We make the back and seat solid by gluing the slats together. (See Cut D.) The back is gained on the inside so that the standards will let into it one-eighth of an inch. When the back is thus fitted on the standards and *glued* and *screwed* and *bradded* to them, we think it apparent to any one that the desk, when firmly fastened to the floor of the school-room, *can not fail* to resist all lateral pressure to which it can possibly be subjected. In short, it has proven to be the strongest, most beautiful, and most durable desk ever offered to the public, and will say to the reader, we think if you will give it a careful examination your own judgment will corroborate every assertion we have made.

Cut D.

Please examine it before you purchase.

COMMON SENSE BENT WOOD DESK.

(See Description, Opposite Page

FOR STRENGTH, BEAUTY AND DURABILITY IT HAS NO EQUAL.

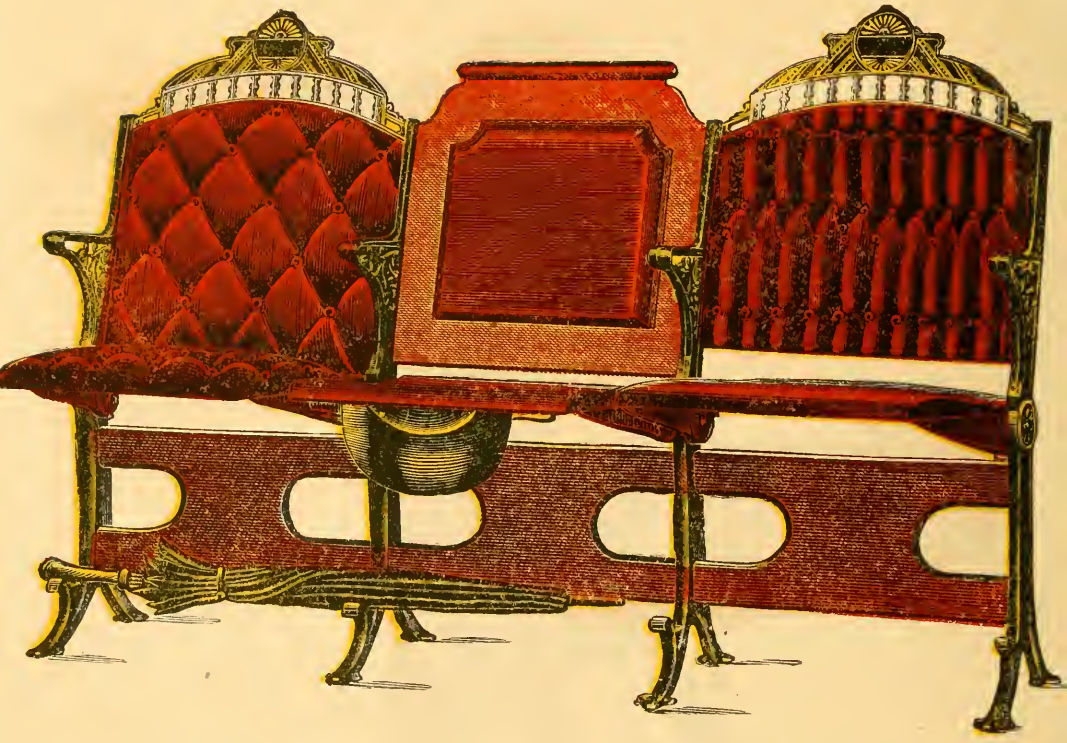
DON'T BUY WITHOUT SEEING IT.

EVERY DESK WARRANTED FOR FIFTEEN YEARS.

Solid End Bent Wood. Back and Seat Glued Solid. Malleable Iron Castings. Will not Break or Get Rickety.

READ CAREFULLY DESCRIPTION of the Construction of the Common Sense Desk.

OPERA AND ASSEMBLY CHAIRS.

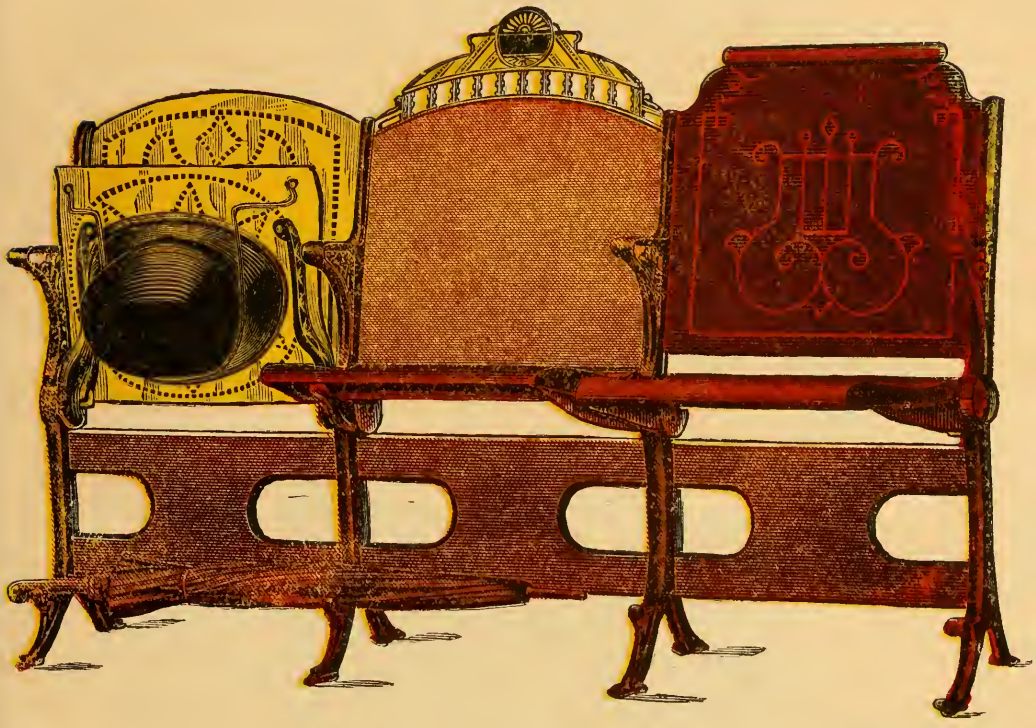


No. 160. No. 161. No. 162.

Nos. 160 and 162.—Upholstered seat and back; chair tufted, fluted or plain, with noiseless hinge, umbrella and hat rack. Upholstered in any kind of goods desired. Cheap, medium or fine. These chairs have no superiors for strength, convenience or comfort. The foot rest prevents those in rear seat from encroaching upon those in front, and at the same time gives a good comfortable rest for the feet. The tops are highly ornamented, and makes in every respect a very fine chair.

No. 161.—Is same as No. 160, save in the top and style of upholstering. Both the seat and back may be upholstered flat and the top is very suitable for churches &c.

OPERA AND ASSEMBLY CHAIRS.



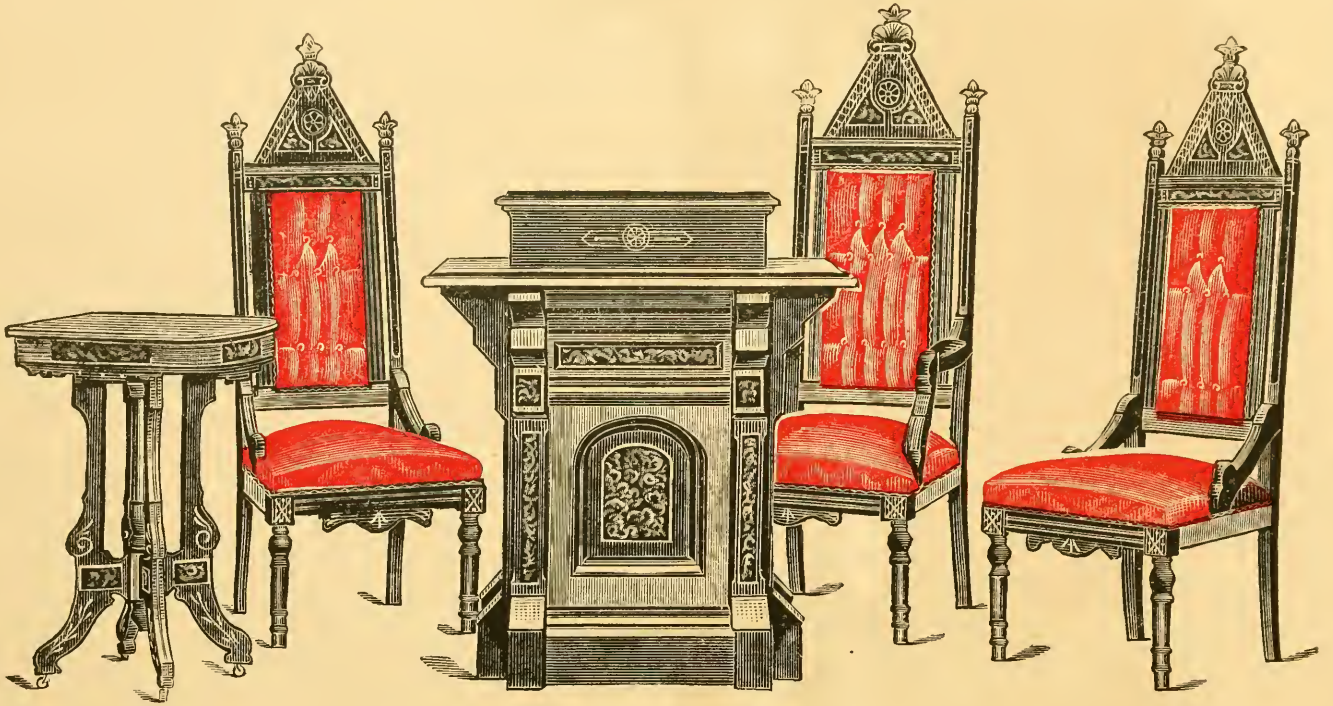
No. 60. No. 61. No. 62.

No. 60.—Perforated seat and back, curved to suit the form of the body, and a very easy, nice, strong chair.

No. 61.—Is a plain curved seat and flat back, with ornamented top, foot rests, umbrella racks, &c. Very complete.

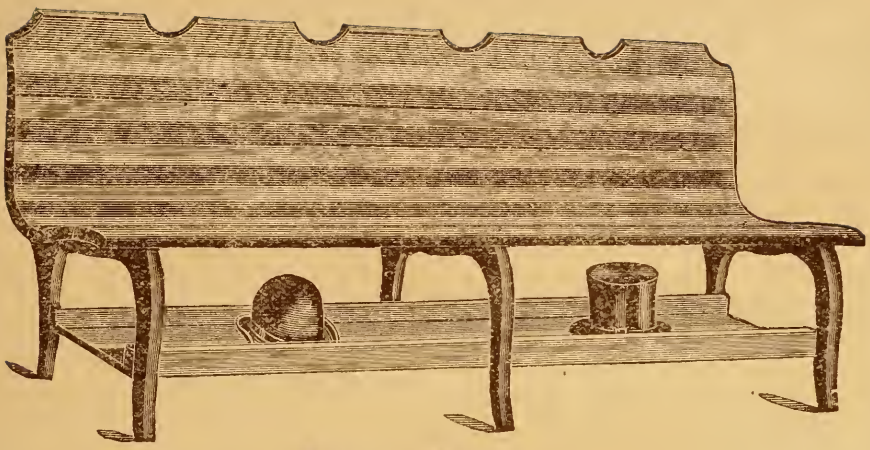
No. 62.—Is similar to No. 61, save the top and back. The back as shown is ornamented, and the top is fine wood scroll finish.

Any one of these three chairs (60, 61 and 62) is suited for churches and buildings wanting a nice strong chair with all the conveniences, and not yet expensive.



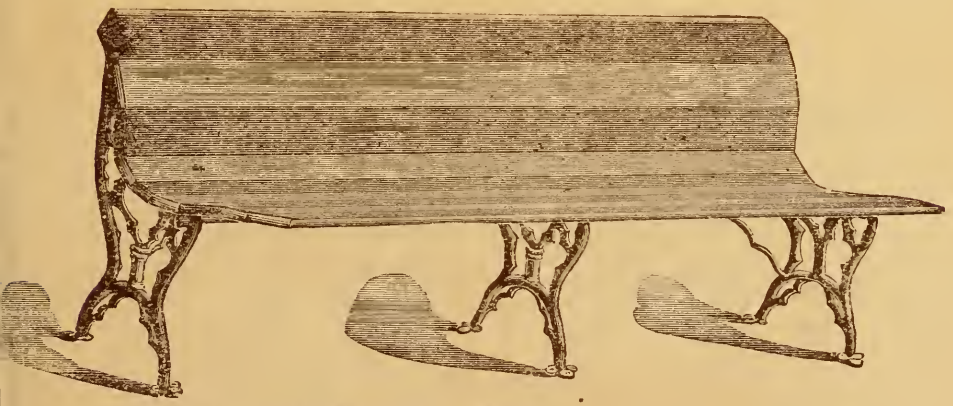
PULPIT SET No. 29.

Upholstered in any color, Terry, Plush, Hair Cloth or Leather desired. We have a large variety of Pulpit and Lodge Chairs, with prices to suit.



Berean Settee.

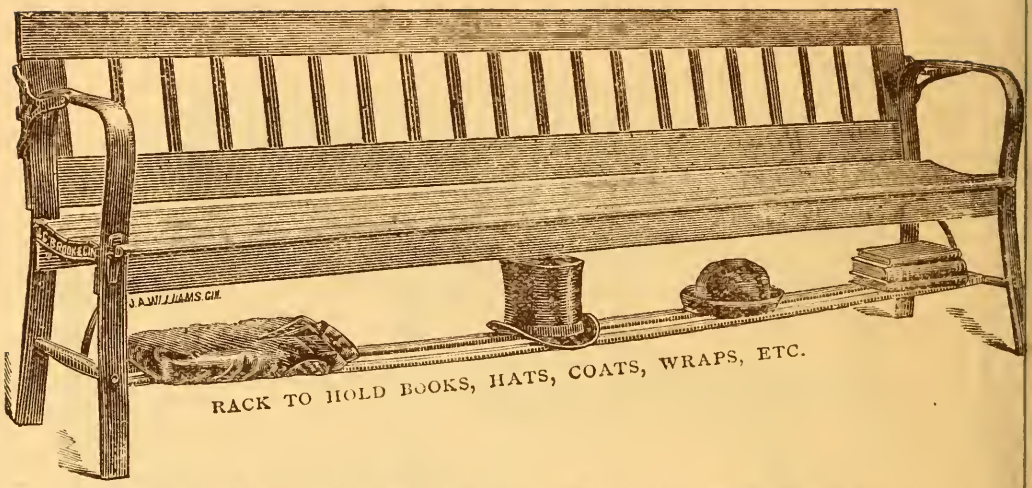
Curved Slat Seat and Back. Seat Stationary. Broad Legs to use without screwing to the floor. Light and strong. Can be moved to any place in the school-room by one scholar. Made to order any length.
The best Sunday-School seating made. Can nest together and pile in very little space when the floor-room is desired.



Excelsior Settee. Made any Length.

Curved Folding Slat Seat, Curved Slat Back. High School, Grammar, First, Second and Third Intermediate and Primary Sizes. Other sizes than eight feet made to order.

Our styles of Settees are general favorites. The curve of the seat and back render them a much more comfortable seat than a chair. They are strong and elegant in appearance. Like all of our Furniture, the Settees are well supported. Either of these styles, on account of their strength, make excellent seating for public halls.

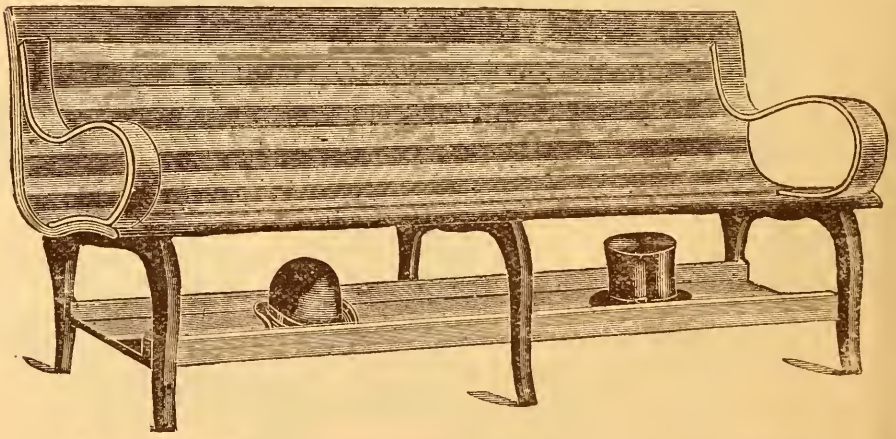


RACK TO HOLD BOOKS, HATS, COATS, WRAPS, ETC.

Bent Wood, Reversing Back S. S. Settee.

The end is made of one piece of solid oak bent, as shown in cut, making it strong, handsome and light in weight, with rack as shown for Books, Hats, Wraps, etc. Does not need to be screwed to the floor, made any length desired.

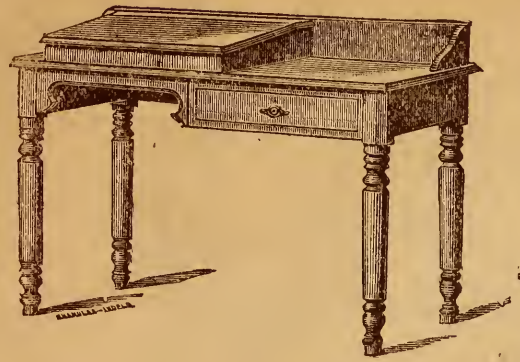
ASSEMBLY SETTEE.



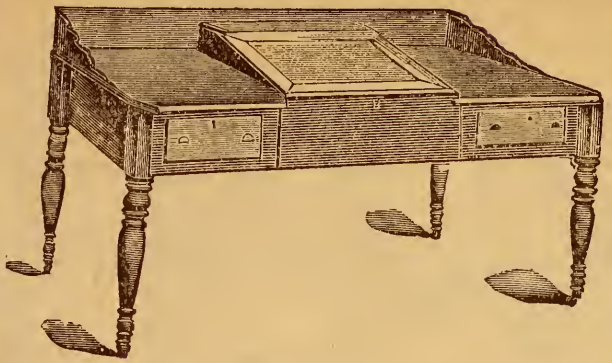
Newest and Best. For Halls, Schools and Chapels.

Curved Slat Seat and Back. Seat Stationary. Arm or end supports large, strong and handsome. Broad Legs to use without screwing to the floor. Support for Hats, Wraps and Books, and Rest for feet. Light and strong. Can be moved to any place in the school-room by one scholar. Made to order, any length. The best Hall, Chapel and Sunday-School seating made. Can pile in very little space when the floor-room is desired.

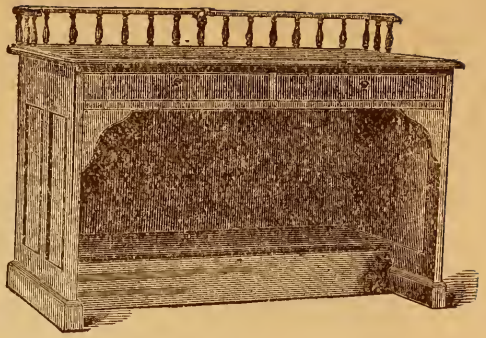
TEACHERS' DESKS.



Teachers' Desk, No. 37.

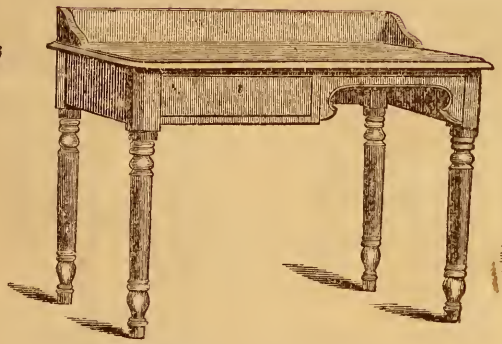


Office or Teachers' Desk, No. 1.

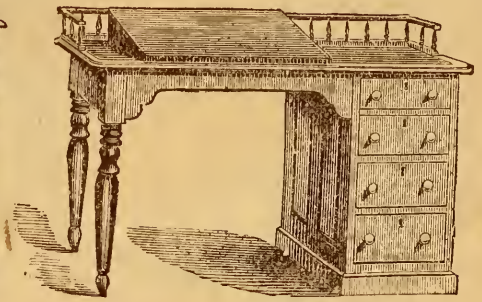


Teachers' Desk, No. 112.

Quaker City Desk
or Teachers' Desk, No. 2.

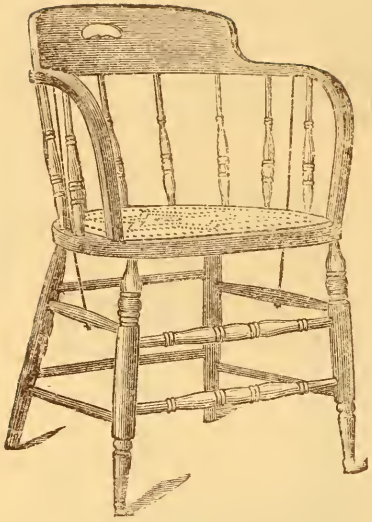


Teachers' Desk, No. 39.

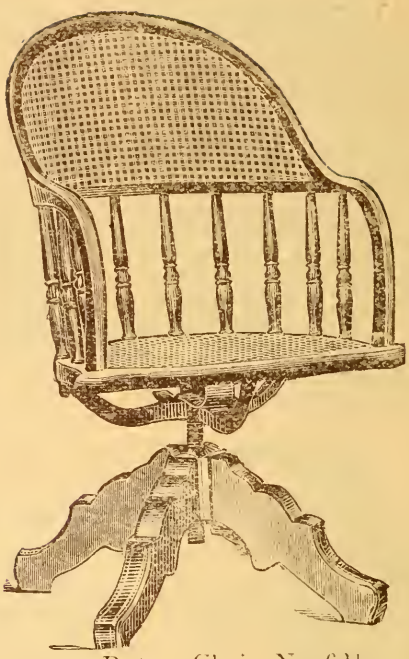


Teachers' Desk, No. 38.

Teachers' Desk, No. 3.



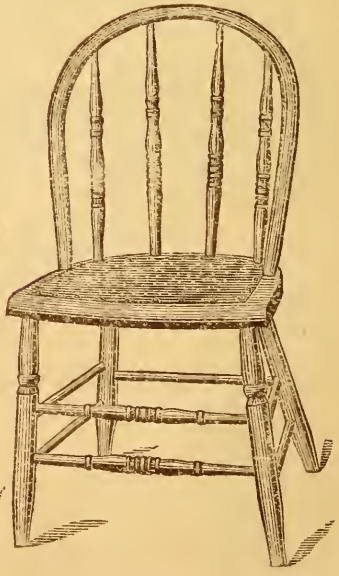
Arm Chair, No. 56½.



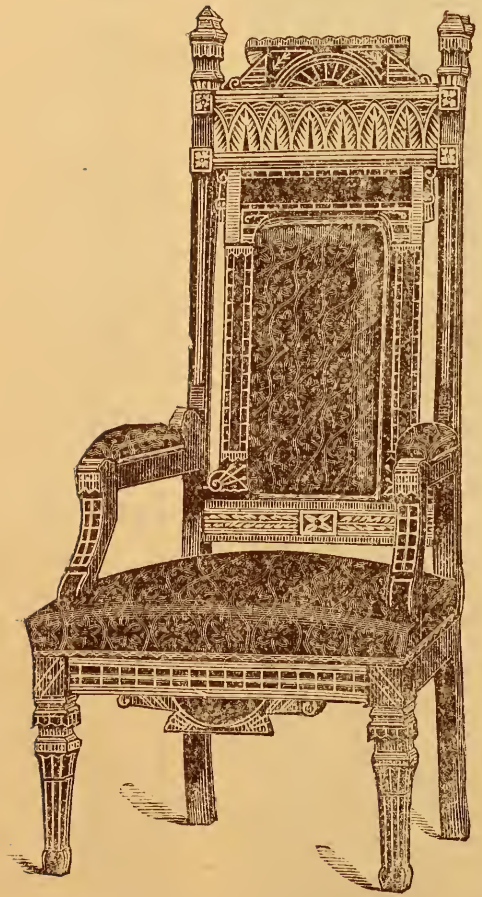
Rotary Chair, No. 62½.

Cheap Chair, No. 4½.

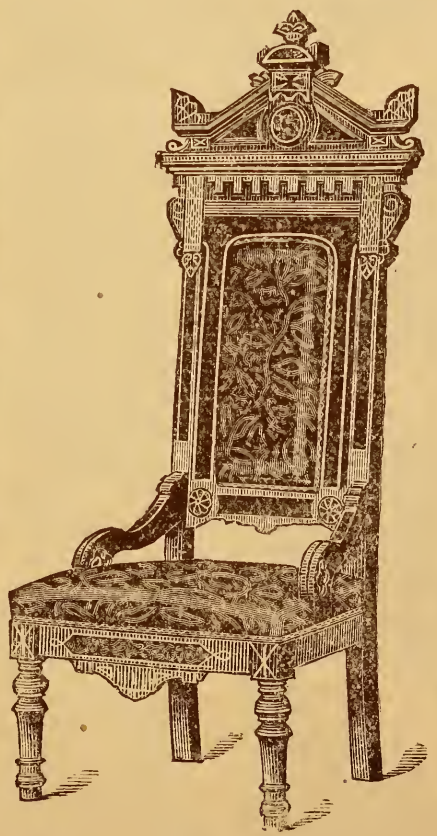
Kindergarten Chair.



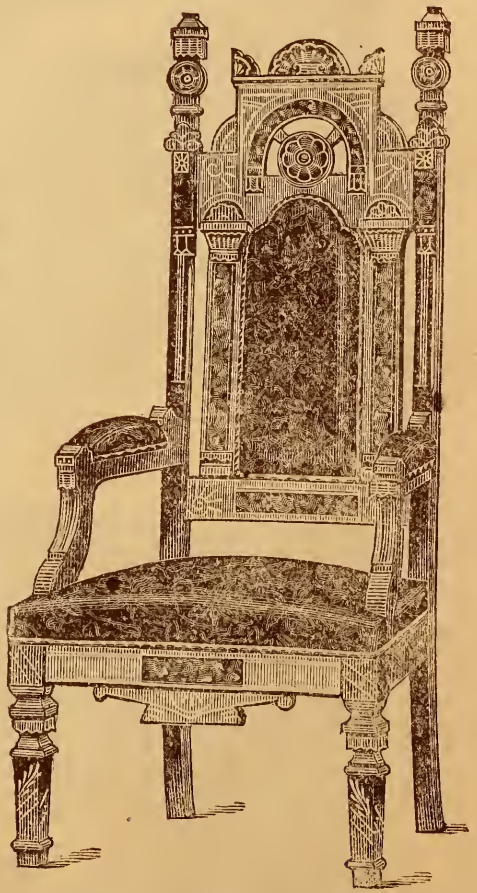
Teacher's Chair No. 7.



Pulpit Chair, No. 8. 5 ft. high.

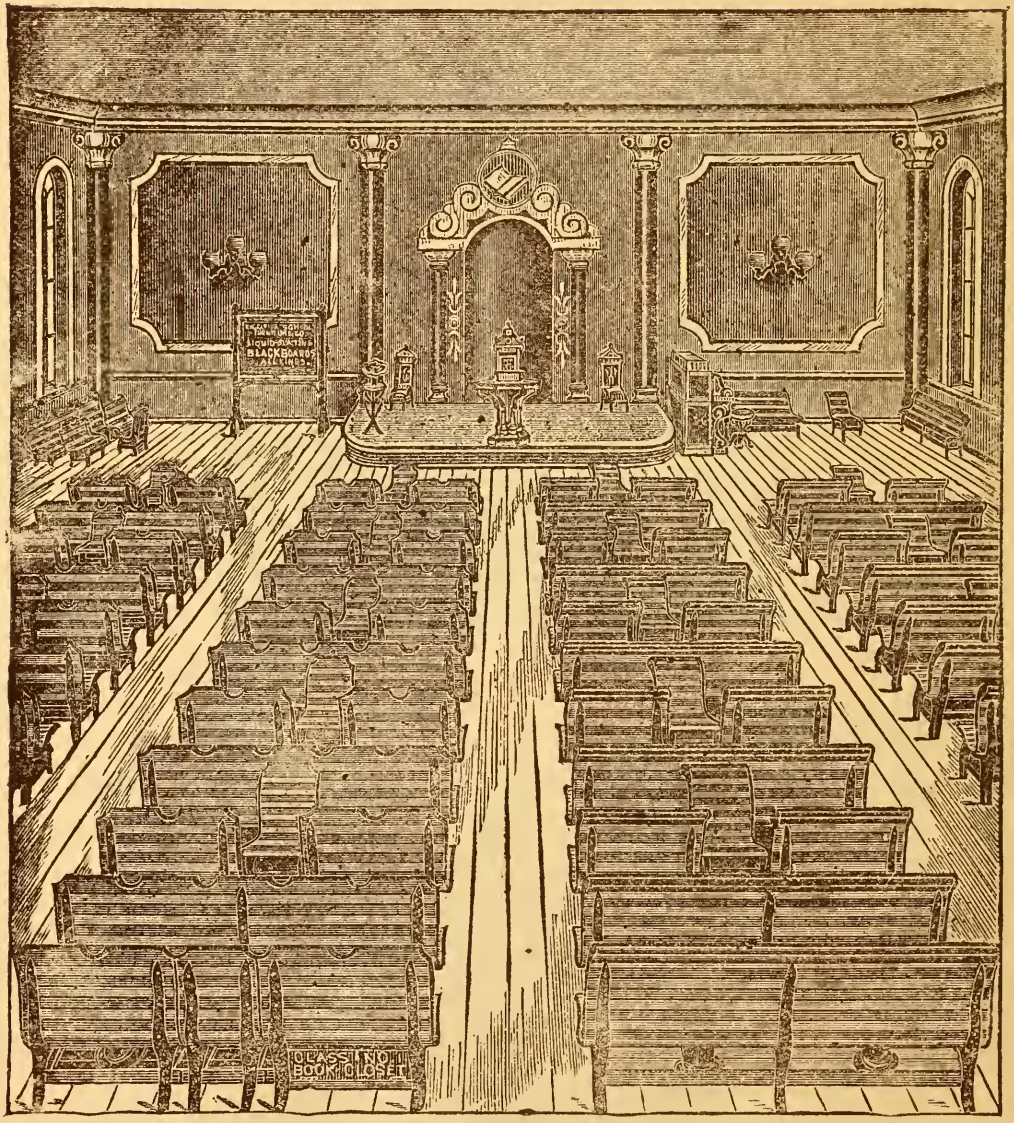


Pulpit Chair, No. 10. 5 ft. 5in. high.



Pulpit Chair, No 6. 5 ft. high.

NEW BEREAN SABBATH SCHOOL SITTING.



New Berean S. S. Assembly and Lecture Room Setting.

Overcomes all the objections of Settees for a Sunday-School Room, and gives to all a seat perfect in its construction. Reversible Settees are better than chairs for they are always in their places, and will seat from 20 to 25% more persons than chairs, but Reversible Settees can not be made so comfortable as the stationary seat and back; in the very nature of things, as the front and back of seats, and top and bottom of backs must be all alike in the Reversible Settee, but in our Berean Settee, the curves, angles and inclinations are made to fit the body, and the teachers' chair settee is as light as an ordinary chair, and much more comfortable, and when set between the two short settees it makes the same appearance as one long settee, and is to all intents and purposes the same as a long settee, for you can sit right over the joint of the settees and not know it. The cut on the opposite page is a correct representation of a room with the setting all ready for class recitation. When the bell taps to close the Sunday-School lesson, the teacher just sets his chair back on a line with the others, and without noise or confusion, in less than a minute's time he is sitting in the center of his class, with his face, as well as those of all his scholars, facing the Superintendent's desk or blackboard, ready for any general or closing exercises and then without rearranging or moving a seat, every thing is in readiness for a prayer meeting or any other general exercise.

Superiority of our Berean Sunday-School Assembly Settee over others.

1st. It gives more seating than any other in the space.

2nd. It furnishes a perfect class group for the study of the lesson with the teacher in the center, looking right in the face of all the class.

3rd. It furnishes a perfect lecture room setting, as comfortable as a seat can be made, settees all facing platform, and the architectural harmony of every seat perfect.

4th. It obviates all the noise necessary with either chairs or reversible settees, in getting classes in position for the lesson, and back again to general exercises, as no person moves but the teacher.

5th. It furnishes a complete book-case for all the books of each class right at the side of the teacher, with lock and key, saving the wear and tear of carrying the books to and from the general library, as well as preventing the noise and saving the labor necessary to the same.

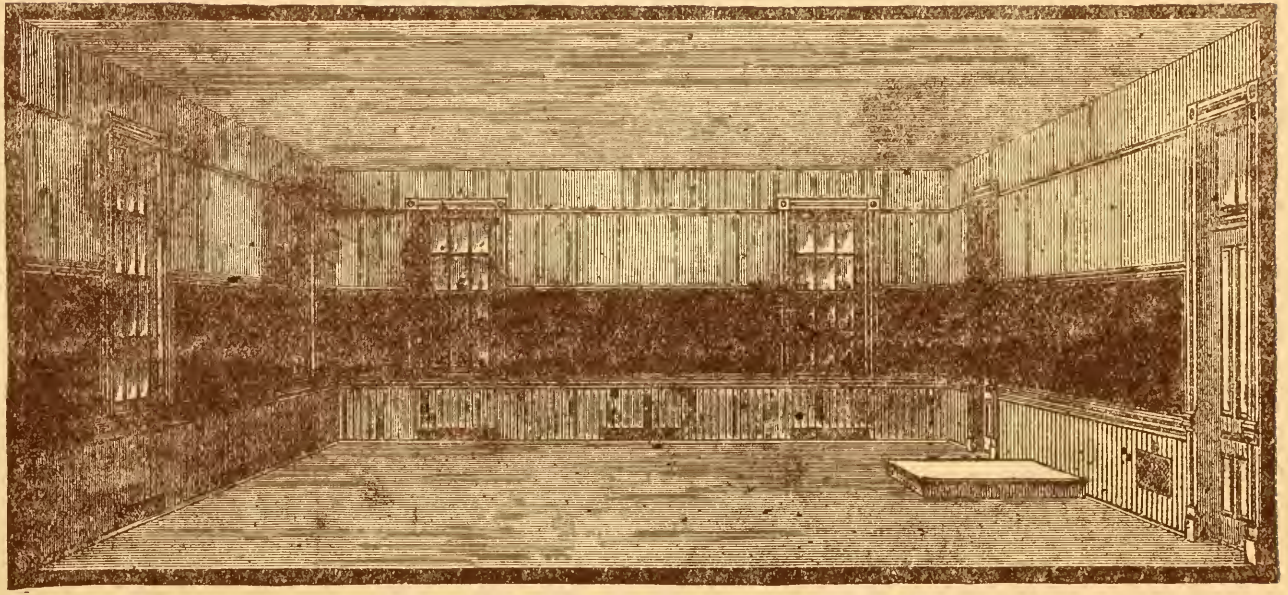
6th. It furnishes a rack for all persons' hats or wraps, and over-shoes, males or females.

7th. It furnishes a foot-rest, so essential to every comfortable sitting.

8th. The seats are made to NEST TOGETHER, so that they can be piled together in a very small space when the floor is desired for socials, festivals, etc., etc.

9th. The settee needs no fastening to the floor, but is light in weight, and strong so it is easily handled and will wear well.

10th. Each individual setting, as shown by the left side settees in room plan, is clearly marked, and may be numbered if desired.



Real Slate, for blackboard purposes, is rapidly coming into use. While the first cost is somewhat greater than that of other materials, its great superiority in all respects, its perfect surface and absolute indestructibility, makes it really the cheapest blackboard in use. It will last longer than the school-house, and is always in perfect order.

These slates are made in sections to fit the spaces for which they are intended, and are shipped with perfect safety to all parts of the country.

PRICE, 50 CENTS PER SQUARE FOOT.

Standard width 3 feet, but if desired, I can send 3½, and in extreme cases 4 feet, but I consider 3 feet the best width. Special sizes made to order. Any length of board can be made by joining sections.

I replace, *gratis*, all boards broken in *transit*. When ordering, give the EXACT LENGTH of the space where you desire to have the blackboard; the slate will be cut to the fraction of an inch so as to fit the space exactly.

BLACK-BOARD AND SLATING, ETC.

EXCELSIOR LIQUID SLATING.

Impervious to Water, will not scale off, produces a surface equal to the best Pennsylvania wall-slating. It never changes color; can be applied on Plaster, Hard Finish, Paper, Old Black-Boards, or Walls; is readily applied; dries in a few minutes, hardens in a day. Full directions for applying given with every can.

One Quart will cover about 50 square feet of Board, Three Coats.

Prices of Excelsior Liquid Slating.

Black, per pint,	$1 25
" " quart,	2 25
" " half gallon,	4 25
" " gallon,	8 00

Green, 25 per cent. higher. We have a cheap Slating as good as ordinary Slating at $6 00 per gallon.

THE NOVELTY

PATENT LISTING ERASER.

$1.50 per Dozen.

SAMPLE SENT BY MAIL.

The Best and Cheapest for the following reasons:

Because they keep the board black and clean.

Because they rid the school-room of chalk dust, and thus preserve the lungs and health of pupils.

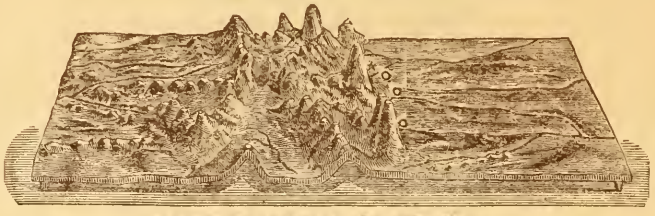
Because they *absorb* the crayon dust.

Because they can be easily and thoroughly cleaned by rapping the cloth side on some hard substance.

Because they are less in price than other erasers, and last twice as long, and are cleaner and better.

Because if you send 10 cents for a sample, (which will be sent by mail,) it will speedily erase any doubts you may have as to its merits.

GEOGRAPHY MADE ATTRACTIVE.



COLORADO.

From Nichols' Geographic Models.

The models are a durable miniature representation, designed to show the exact shape, the relative size, contour, relief and position of the several United States, made of thin iron plates, light and durable. When placed together they somewhat resemble a relief map, about 42 by 70 inches in extent, adapted to a scale that a child can use in making measurements.

THE USE OF THE MODELS WILL RESULT IN

1. A thorough awakening of interest in the subject of Geography.

2. A clear, distinct conception of the country in general and in detail.

3. The location of places, size and shape of states, heights and trend of mountain masses, with the form of the "vales between," well fixed in mind.

4. A sound foundation upon which to build the further structure of Geographical science.

J. B. MERWIN, Editor American Journal of Education, writes:

"After a very careful examination often repeated, of the Geographical Models, I firmly believe more geography can be taught with these models in a single term of school, than can be taught without them in ten years.

1. Because the pupils get *at once* a view of the *whole* country. 2. It gives a comparatively correct idea of the relative *size* of each state. 3. The boundaries of each state can be impressed on the mind of the pupils. 4. The elevations and depressions—rivers, plains, water-sheds, &c.—can be seen at a glance, and so indelibly impressed upon the mind of the pupil that he will ever after carry a more distinct and vivid impression in his mind, than if he had visited every square mile of the Continent in person.

For the above reasons I most earnestly and strongly indorse these models as the best "helps" to a study of our country invented in this century."

This conclusion is endorsed by the leading educators in the United States. For further particulars apply to

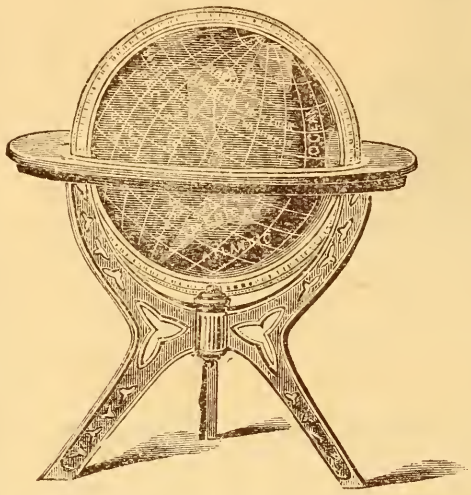
GEOGRAPHICAL APPARATUS.

GLOBES, MAPS, Etc.



The New Terrestrial and Celestial Globes.

Of the best manufacture, are beautiful in designs, and the neatest and finest made.

The following are among the advantages possessed by our Globes:

1st. Outlines of natural and political divisions are distinctly given, and on the 8 and 12-inch Globes the mountain chains and deserts.

2d. Parts representing water are colored blue—the natural color of large bodies of deep water.

3d. The Ocean Currents are clearly traced by white lines.

4th. Through a new invention, they are composed of a material that will not crack or fade.

5th. The finish of the Globes is such that when soiled they may be cleaned with a damp cloth or sponge.

JOHNSTON'S NATIONAL SERIES OF LARGE SCHOOL MAPS,

Engraved and Published by W. & A. K. JOHNSTON,

Geographers, Engravers and Printers to the Queen, Edinburgh, Eng.

Most complete, handsome and substantial School Maps ever published. Latest and best. No others that can compare with them.

This well-known series possesses the following advantages:

From the great demand, they are constantly at press, and no map is ever printed without being thoroughly revised.

They are new and authentic, showing the latest Geographical Discoveries and Political Changes in every part of the world.

The Maps are printed by steam, in permanent Oil Colors.

The whole series is of one uniform and convenient size, namely—50x42 inches.

Designed to be used in connection with any text-book on Geography.

Names are all engraved in plain Roman Letters. No "key" required.

The Maps are all engraved on copper plates, by which means lines and letters are shown with greater beauty and distinctness than in any other way. They are handsomely colored by States and Nations, have heavy cloth backs; are mounted on rollers, and varnished, the best materials only being used.

Any Map sold separately.

The Hemispheres	50x42 inches	$5 00
United States, Mexico and Canada	50x42 "	5 00
Europe	50x42 "	5 00
South America	50x42 "	5 00
Asia	50x42 "	5 00
Africa	50x42 "	5 00
World, Mercators Projection	50x42 "	5 00

PRICES IN SETS.

Common School Set (Hemisphere, United States and Europe)	$13 50
Complete Set, Seven Numbers	30 00
Complete Set, Packed in a neat Lock Box	33 00

Also, the New Rand & McNally Series at same prices as Johnston's.

State and all other kinds of Maps.

The New Veneer Map Case

PROTECTS MAPS FROM DUST.

Light and Easily Transferable from Room to Room.

Strong and Durable, will last as long as the building.

THREE thicknesses of birch veneer glued together and then under heavy pressure moulded to the proper shape so as to ***completely cover*** the ***Map,*** as seen in this cut below.

CASE WITH MAP ROLLED UP.

The map is mounted on a ***spring roller,*** thus it is ***easily rolled up*** and should be kept so when not in use

The case is only 3½ inches wide, and when suspended over the blackboard takes up but little space, thus it is always ready for the class.

CASE WITH MAP PARTIALLY DRAWN DOWN.

The Veneer Cases are made exclusively for

JOHNSTON'S CELEBRATED SCHOOL MAPS,

Size 50 x 42 inches.

Johnston's maps are ***kept*** strictly ***accurate***—see new maps of Africa, South America, Europe and United States—and for elegance of design, harmony of coloring and attractiveness in all that goes to make a beautiful map, ***Johnston's have no equal.***

Price--Any Map 50x42 in Veneer Case, complete, $6.50.

Apparatus and School Supplies of Every Kind.

SCHOOL MAPS. JOHNSON'S and OTHERS, the CHEAPEST and BEST.

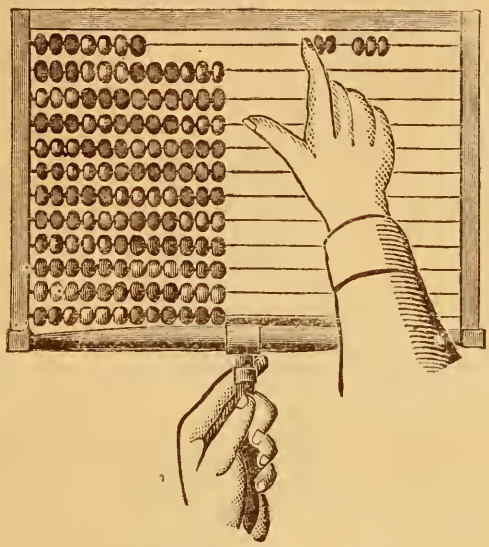
This cut shows our Hinged Globe Case which is furnished with our eight and twelve-inch globes. It is easily arranged as a cabinet in a school room.

The Best Liquid Slating Made. Pure Goods Cheap.



NUMERAL FRAMES.

The Numeral Frame is an important aid to the teacher in Primary, Intermediate, and Grammar Schools. It greatly assists, in teaching, to add, subtract, multiply, and divide, and is especially useful in illustrating fractions.

Nicely made, and varnished, having 144 colored balls,.....$1 50
" " " " 100 " " 1 25
Large, nicely made, and varnished, having 100 colored balls, Size, 18 and 24 inches, with stand to hold Maps, Charts, etc..... 5 00

ORRERY OR PLANETARIUM.

The Orrery is an instrument which shows the proportional size and relative position of the planets, and times of their revolution. An illustration with this machine brings out our vast system of sun, planets and moon into perfect and tangible shape, and in so small a compass that the YOUNG, even, can comprehend it.

PRICE LIST.

Brass Standard, highest finish,.....$17 00

GEARED TELLURIAN.

A Geared Tellurian, Brass, with Compass, Best New Cog-wheel Movement, $25.00.

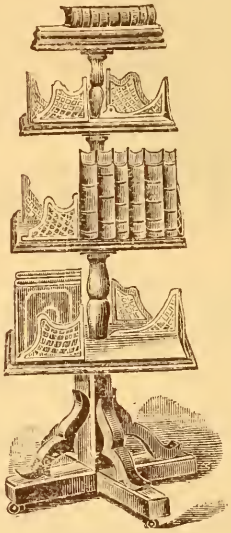
The Tellurian or Season Machine has been prepared to assist the teacher in exylaining the phenomena arising from the revolutions of the earth, and its relations to the other heavenly bodies. It illustrates the causes of: 1st. Succession of day and night and their differences in length. 2nd. Changes of the seasons. 3rd. Changes of the moon. 4th. Solar and lunar eclipses. 5th. Philosophy of the tides. 6th. Precession of the equinox. 7th. Differences of solar and sideral time.

EXCELSIOR REVOLVING BOOK CASE.

Patented March 4th, 1879. Additional Patents Applied For.

EVERYBODY WANTS IT!

It is new, convenient, beautiful, cheap; always ready for duty, is the comfort of the office, the pride of the home and the delight of everybody that gets it; the cheapest, neatest, most compact, most convenient, durable and sensible Book Case ever offered to the public.



The very thing needed by our Lawyers, Students, Professors, Clergymen, Physicians, public and private, Libraries, Court Rooms, Public Offices, Reading and Club Rooms, Parlor and Sitting Rooms, etc., etc.

Its Advantages Over all Other Rotary Book Cases Are:

Each shelf rotates separately from the other, so that in books of reference it is much more convenient, and instead of being obliged to turn the whole Book Case, as with other revolving cases; in this a touch with one finger turns the shelf desired, and the balance remain where they were. The shelves are adjustible, and may be raised or lowered with ease, to suit large or small books at your pleasure; it is easily taken apart and put in small compass for transportation.

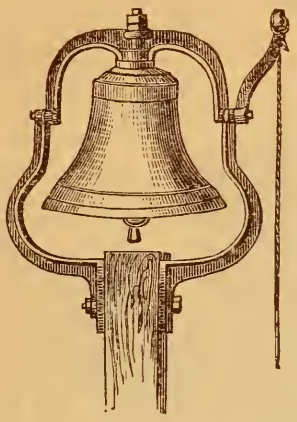
It Holds More Books and Takes up Less Room Than Any Case in the Market.

It is a beauty and the cheapest Revolving Book Case made. These cases will be sent to any responsible party on receipt of one-half the price, with the distinct understanding that if they are not as represented and satisfactory to the purchaser, they may be returned to us and the cash will be returned to you less the freights, and if satisfactory, the remaining half to be sent within thirty days. Special discount to book and furniture dealers who will find it to their interest to order a sample and keep it in their store. PRICE, $15.00.

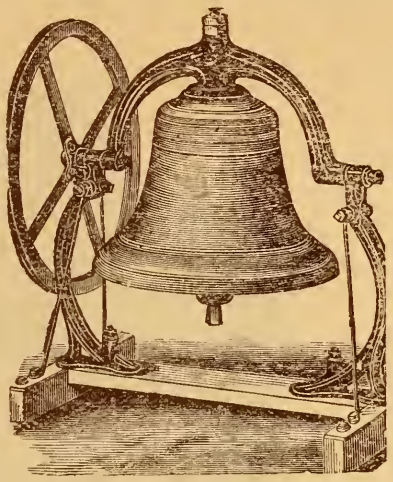
It is Just the Thing For Christmas or Other Present.

If you should not want the case, please hand this circular to some friend that does. **For it is a rare chance to get a good thing for little money.**

Samples may seen at



FARM BELLS.



CHURCH AND SCHOOL HOUSE BELLS.

STEEL ALLOY BELLS.
